

TOWN OF JACKSON GASOLINE PIPELINE SPILL UPDATE

DATE: October 12, 2012

CONTACT: Eric Nitschke, Southeast Regional Director, 414-263-8570

As we have discussed at past public information meetings, the Department of Natural Resources will continue moving forward with the Town of Jackson and West Shore Pipe Line Company to obtain more data and information on the proposed long-term water alternatives. The department also continues to work with West Shore and Town of Jackson officials to assess the shallow and deep aquifers in the area, and will provide more information when it becomes available.

Because there is no new sampling information, changes to the boundaries for the advisory area, or information about the long-term water supply or clean up, the department will begin issuing updates every other week. Your next update will be on **October 26**, unless pertinent information becomes available.

In addition to contacting me directly or using our Town of Jackson Hotline, please feel free to contact Tom Puchalski at **920-387-7872** with your questions or concerns. Tom has recently joined the department and has 12 years of experience as a hydrogeologist. He is assuming duties in this region that were previously assigned to Zoe McManama.

There are no further updates at this time. I would like to thank all of you for your continued patience and cooperation. The Department of Natural Resources continues to remain committed to insuring a full clean up and long-term water supply solution during that cleanup.
